

**CLASS 14 / NOV 24 / U10**

# **FINAL PRODUCTION**

**P4b AND BOOK — MAKE IT, PHOTOGRAPH IT, WRITE IT UP**

**NOTHING DUE**

**FINAL**

---

# A PRODUCTION PLAN

Lab time is shared and limited. Write the sequence down before you book the machine.

## 01 CONFIRM

Sheet, thickness, fit  
and the cutting file.

## 02 TEST

Coupon and a few  
parts. Adjust.  
Regenerate.

## 03 CUT

The batch, from the  
regenerated file.

## 04 CHECK

Count and inspect  
every part against  
the list.

## 05 ASSEMBLE

In label order, dry  
first.

## 06 RECORD

Photograph each  
stage as it happens.

## PLAN FOR

Lab availability • the time a batch takes • a spare part or two • a retest if the fit changes

**TEST CUTS AND FAILED PARTS COUNT AGAINST YOUR ONE SHEET. KEEP BACKUP MATERIAL IN MIND.**

---

# TEST BEFORE THE BATCH

A small cut now is cheaper than a sheet of parts that do not fit.

## FIT

Cut the coupon from the production sheet. Confirm the slot that holds.

## JOINT

Cut one registration joint: two slices and the spine, dowel or spacer.

## SMALLEST

Cut the smallest and thinnest part. If it breaks, change the profile.

## LABEL

Check the engraved numbers are legible and on the hidden face.

**ANY CHANGE AFTER A TEST — GEOMETRY OR MATERIAL — MEANS YOU REGENERATE THE CUTTING FILE.**

Keep every test piece. They are evidence for the process sheet.

---

# THE ASSEMBLY SEQUENCE

The order you sliced in is the order you build in. Draw it before you do it.

## BEFORE GLUE

- Lay the parts out in label order
- Dry-fit the whole assembly on its registration
- Check the up and front marks on every part
- Fix a problem part now, not after it is glued

## THE ASSEMBLY DIAGRAM

P4b asks for one on the process sheet.

Show the registration first, then the parts arriving in order.  
Number them as they are labeled.

Someone else should be able to build it from the diagram.

**IF THE PARTS DO NOT GO TOGETHER IN LABEL ORDER, THE ORDER IS WRONG — NOT THE PARTS.**

---

# PHOTOGRAPHING PHYSICAL WORK

The booklet shows the object through photographs. Treat them as drawings, with your GSM.

## LIGHT

One soft main light from the side. The gaps between slices need shadow to read.

## BACKGROUND

Plain, even and wider than the frame. Nothing else on the table.

## SCALE

One view with a hand or a ruler, so the size is never in doubt.

## SEQUENCE

The same angle at each stage: parts, test, half built, complete.

**PHOTOGRAPH THE CSG PRINT TOO. BOOK ASKS FOR PHOTOGRAPHS AND CAPTIONS OF BOTH PHYSICAL PIECES.**

Shoot more than you need, from the same position each time. Pick the set on the page, not on the camera.

---

# DOCUMENT THE REVISIONS

The booklet rewards substantive revision. Show what changed, not only the final state.

| BEFORE                                                 | CHANGE                                                                     | WHY                                              | AFTER                                                     |
|--------------------------------------------------------|----------------------------------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------|
| The version that was reviewed:<br>sheet, file or part. | What you changed, in one<br>sentence, with the parameter<br>or step named. | The critique, test or failure that<br>caused it. | The revised result, shown at the<br>same scale and angle. |

|      |                                                                                                          |
|------|----------------------------------------------------------------------------------------------------------|
| KEEP | Dated file versions · test pieces · review notes · failed parts, photographed before you throw them away |
|------|----------------------------------------------------------------------------------------------------------|

A REVISION YOU CANNOT SHOW IS A REVISION THE REVIEW CANNOT SEE.

# FOUR PROJECTS, NINE ASSIGNMENTS

The booklet: 17 × 11 inch pages in your graphic standards. The GSM is a chapter, and it is also every page.

## P1 GSM

**GSM**

Graphic Standards  
Manual

---

Applied to every page of the booklet,  
and also submitted as a separate  
revised PDF.

## P2 CSG

**P2a**

CSG process and  
instructions

**P2b**

CSG 3D printed object

## P3 PANELING

**P3a**

Descriptive geometry  
module

**P3b**

Arrays

**P3c**

Attractor: 2D field  
plotter drawing

**P3d**

Attractor: site analysis  
with Mixtli

## P4 VOLUMETRIC DATA

**P4a**

SDF volume

**P4b**

Discretizing and laser-cut  
fabrication

FOR EACH: THE REVISED SHEET · THE PROCESS · WHAT CHANGED AFTER CRITIQUE · PHOTOGRAPHS FOR P2b AND P4b

---

# REMINDER — BOOK

Substantive revision 40% · documentation 35% · visual identity 25%.

01

Compile all four projects and nine assignments in revised form, using 17 x 11 inch pages and your graphic standards.

02

Include process diagrams, photographs and captions for the CSG print and laser-cut volume. Identify substantive revisions after critique.

03

Submit the booklet PDF, a separate revised GSM PDF, editable project files and dependencies, and required fabrication files.

04

Present the laser-cut assembly and the CSG print or its review documentation as directed. The exact final review slot remains to be confirmed.

**DUE AT THE FINAL REVIEW · DECEMBER 10–16, 2026; EXACT REVIEW SLOT TO BE CONFIRMED / 11%**

---

# NOW — PRODUCTION

Rest of the class: tests reviewed, production planned, booklet moving.

Your fit and joint tests on the table, with what you changed

The cutting file regenerated after the last test

A written production plan with your lab time booked

The assembly diagram drafted in label order

One booklet spread revised, with a before-and-after

**TEST, REGENERATE, THEN CUT. IN THAT ORDER.**

---

# BEFORE NEXT CLASS

## NEXT

Week 15 (target Dec 1) — Assembly follow-through, documentation and file checks. Review week: nothing is due.

## MAKE

Cut the batch and assemble within your lab allocation. Photograph each stage from the same position.

## BRING

The assembly as far as it has got, your photographs, and the booklet with every project in place.

## CHECK

P4b checkpoint, Week 15 — Dec 1 (target): Review the assembled result, photographs and final booklet documentation.
