

CLASS 15 / DEC 1 / U10

DOCUMENTATION AND BOOKLET

P4b AND BOOK — FINISH, CHECK, PACKAGE

NOTHING DUE

REVIEW WEEK — NO GRADED SUBMISSIONS

REVIEW WEEK: NOTHING IS DUE

This week is reserved for studio reviews. Use the class to finish and check, not to submit.

CHECKPOINT

P4b — THE ASSEMBLY

Review the assembled result, photographs and final booklet documentation.

WORK

ASSEMBLY FOLLOW-THROUGH

Finish cutting and assembly within the lab time you have. Replace failed parts from the same sheet.

CHECK

BOOKLET AND FILES

Every project in place, every file packaged and opened from a clean folder.

NEXT AND LAST: THE FINAL REVIEW, DECEMBER 10–16, 2026; EXACT REVIEW SLOT TO BE CONFIRMED.

FINAL CHECKLIST — BOOK

Substantive revision 40% · documentation 35% · visual identity 25%.

01

Compile all four projects and nine assignments in revised form, using 17 x 11 inch pages and your graphic standards.

02

Include process diagrams, photographs and captions for the CSG print and laser-cut volume. Identify substantive revisions after critique.

03

Submit the booklet PDF, a separate revised GSM PDF, editable project files and dependencies, and required fabrication files.

04

Present the laser-cut assembly and the CSG print or its review documentation as directed. The exact final review slot remains to be confirmed.

DUE AT THE FINAL REVIEW · DECEMBER 10–16, 2026; EXACT REVIEW SLOT TO BE CONFIRMED / 11%

FINAL CHECKLIST — P4b

Visual documentation 20% · computational understanding 20% · technical execution 15% · fabrication quality 30% · experimentation 5% · requirements and identity 10%.

01

Use the selected P4a volume. Compare two section directions or intervals, then develop at least 12 ordered slices with material thickness and a registration system.

02

Fit the assembly within 300 mm on each axis and one confirmed material sheet. Test kerf and fit before the batch; label and nest every part.

03

Laser-cut and assemble the slices under FabLab procedures. Include test cuts and failed parts in the material allocation.

04

Present the assembly with one 17 x 11 inch process sheet showing the continuous volume, section sequence, cutting layout, assembly diagram and photographs.

05

Submit the editable source, cutting file and documentation. Regenerate fabrication files after any geometry or material change.

CHECKPOINT · WEEK 15 — Dec 1 — Review the assembled result, photographs and final booklet documentation.

CHECK EVERY SPREAD

Read the booklet as a reviewer would: one project at a time, then as a single document.

EACH ASSIGNMENT SHOWS

- The revised result, large
- A diagram of the procedure
- The parameter values that matter
- What changed after critique, and why
- Captioned photographs, for P2b and P4b

THE WHOLE BOOKLET

- One grid, one type system, your GSM colors
- All four projects and nine assignments
- A contents list that matches the pages
- Page numbers and consistent captions
- 17 × 11 inch pages, exported to one PDF

SUBSTANTIVE REVISION IS 40% OF THE BOOKLET GRADE. A REPRINTED SHEET IS NOT A REVISION.

PACKAGE THE FILES

Three kinds of file. The review may open any of them, on a machine that is not yours.

EDITABLE

Every project file with its graph intact, plus its dependencies: textures, linked files, supplied groups and add-ons you used.

FABRICATION

The files that made the physical work: the P2b print file, the P3c plot file and the final P4b cutting file.

PDF

The booklet PDF, and the revised GSM as a separate PDF.

NAME_ARC3133_FINAL/

booklet.pdf gsm.pdf

source/ P2a P2b P3a P3b P3c P3d P4a P4b

An example structure only. Follow the naming and upload instructions posted on Canvas.

FABRICATION FILES MUST MATCH THE OBJECT. IF YOU CHANGED THE PARTS, EXPORT THE FILE AGAIN.

THE CLEAN-FOLDER TEST

Before you submit, pretend you are the reviewer. Do this for every editable file.

01

Copy the package to a new folder, or another computer, and open each file from there.

02

Check nothing is missing: textures, linked files, groups, fonts in the PDFs.

03

Check the units and one known dimension against the physical object.

04

Change an exposed input. Confirm it produces the alternatives your sheets claim.

IF IT ONLY OPENS ON YOUR LAPTOP, IT HAS NOT BEEN SUBMITTED.

THE FINAL REVIEW

December 10–16, 2026. The exact slot is still to be confirmed; it will be announced in class and on Canvas.

PRESENT

The laser-cut assembly, and the CSG print or its review documentation, as directed.

SHOW

The booklet and the revised GSM, with your revisions easy to find.

EXPLAIN

Open an editable file. Change an input, predict the result, explain the nodes.

ANSWER

What was lost and gained from volume to slices, and what you would change next.

THE REVIEW ASSESSES THE WORK AND YOUR UNDERSTANDING OF HOW IT WAS MADE.

NOW — FINISH AND CHECK

Rest of the class: the P4b checkpoint, then booklet and files.

✓

The assembly on the table, complete or with a plan for what is left

✓

Photographs taken: light, background, scale and sequence

✓

Every booklet spread checked against the BOOK list

✓

The P4b process sheet with volume, sections, layout, assembly and photographs

✓

The package opened from a clean folder

NOTHING IS DUE TODAY. EVERYTHING IS DUE AT THE FINAL REVIEW.

BEFORE NEXT CLASS

WHEN

The final review: December 10–16, 2026; exact review slot to be confirmed. Watch Canvas for your slot.

FINISH

The assembly, its photographs and the P4b process sheet. Regenerate the cutting file if any part changed.

SUBMIT

Booklet PDF, revised GSM PDF, editable files with dependencies, and fabrication files — as listed in the BOOK checklist.

BRING

The laser-cut assembly and the CSG print or its documentation, as directed. Be ready to open a file and change an input.
